

Leading the way in hazardous area static control

## Mobile Grounding Solutions

Ex and HazLoc approved static grounding protection

# The movement of flammable products through trucks and hoses can generate high voltages leading to fires or explosions caused by electrostatic sparks.

Rack mounted grounding systems are a great way of preventing spark ignitions, but trucks often need to transfer flammable products in locations where static grounding systems are not provided.

In this scenario truck operators normally rely on bonding their truck to a point that looks like it is grounded, without actually verifying if it has a **True Earth** connection that will safely ground electrostatic charges.

The **Earth-Rite**® **MGV**, removes any doubt about the integrity of the grounding point by verifying if it has a True Earth ground connection.

Additional products from the Mobile Grounding Solutions range enable truck drivers to reduce the risks of sparks from hoses and other equipment used in the transfer operation.

### Scenarios where trucks should be fitted with a Mobile Ground Verification system.

- Vacuum truck industrial cleaning and material recovery services for refineries and chemical plants.
- Bulk chemical road tanker truck transfers at sites where rack mounted grounding systems are not installed.
- Grounding vacuum trucks supporting emergency response
  HAZMAT teams recovering flammable products.
- Grounding trucks that are used to transport chemicals to various locations on chemical manufacturing sites.

#### **Earth-Rite® MGV**

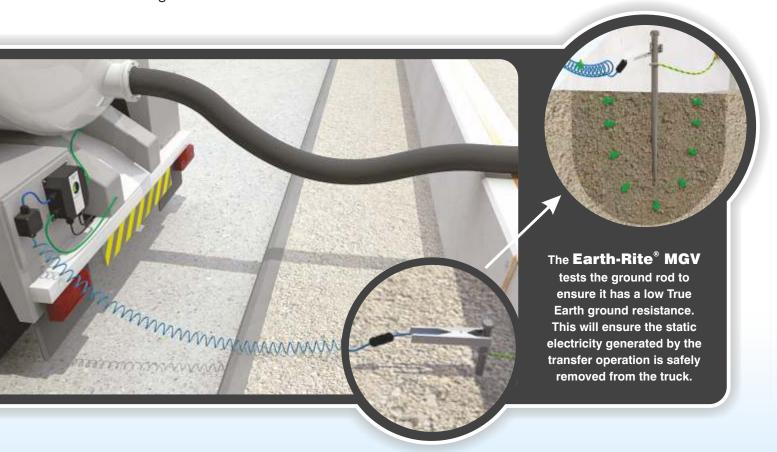

The **Earth-Rite**® **MGV** is a truck mounted grounding system that tests the integrity of a connection to True Earth.

Many objects like ground rods and plant structures are utilised to provide static grounding protection for trucks and many of these points are never tested to ensure that they can ground trucks safely. With the **Earth-Rite® MGV** you never need to question the integrity of a grounding point as it will ensure that your drivers or site contractors have a safe ground connection when handling flammable products.

#### **Key Benefits**

- More secure than basic bonding reels as a True Earth ground is not taken for granted.
- NO time delays waiting for electricians to take resistance readings.
- Simple 'GO / NO GO' design which is easy to operate and does not required specialist driver training.
- Demonstrates compliance with the primary standards in static control including API 2219, NFPA 77 and CLC/TR: 50404.
- Easy installation with the option to interlock with pumps or valves stopping the movement of product in the event that a ground connection is compromised.

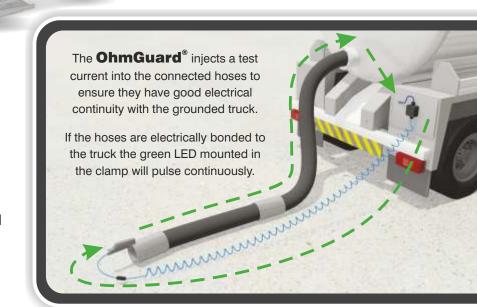

#### OhmGuard®

#### **Hose Continuity Tester**

#### **Key Benefits**

- Detects breaks in electrical continuity of metal wire helixes or internal wires that bond couplings together ensuring the metal parts of hose do not spark during operations.
- Simple PASS / FAIL indication and easier to use than multi-meters.
- PASS indication provided by a high intensity GREEN pulsing LED mounted in the **OhmGuard** clamp.
- Can be used in any flammable gas, vapour and dust atmosphere.

**Bond-Rite**® **EZ** Portable Bonding Verification

#### **Key Benefits**

- Ensures a continuously monitored bond connection between additional equipment (e.g. mobile pumps or IBCs) and the grounded truck.
- Simple GO / NO-GO indication via a pulsing GREEN LED indicator mounted in the clamp.
- Compliant with the recommendations of NFPA 77, API 2219 and CLC/TR:50404.
